Silent Insect Light trap

The Silent Insect light trap is equipped with a sticky trap that utilizes Fly Control technology. It uses UVA lamps with a wavelength of 368nm to attract flying insects and trap them on an organic adhesive surface

In compliance with health regulations that prohibit the use of electric shock-based insect killers, this device adheres to international standards and holds CE certification from Europe, as well as conforms to HACCP principles

Silent Insect light trap

deltrap Insect Sticky Trap

cm, is designed for 30×60 The Deltrap sticky trap, measuring capturing flying insects. The trap is made of cardboard, and its adhesive is composed of organic materials. Its primary use is inside silent light insect trap devices, with the glue being resistant to UV light

Features

Designed for silent light devices

Organic product (without chemicals)

Suitable adhesive for flying insects

UV-resistant

Equipped with grid lines for monitoring insect population in the environment

Product of Turkey

Deltatrap

Fly Bucket Trap

Deltatrap Fly Bucket Trap with Rasyon Attractant Powder is a product designed and manufactured for the biological control of fly populations in open and highly infested areas.

The bucket trap is made of UV-resistant plastic, and its Rasyon attractant powder is organic and free of any chemical substances.

Product Features

Ideal for open spaces and outdoor areas

Equipped with Rasyon fly attractant powder

Biological control of fly populations

Suitable for continuous use

UV-resistant

Suitable For

Factories / Livestock Farms
/ Poultry Farms / Slaughterhouses
/ Waste Recycling Centers / Equestrian Clubs
/ Gardens and Villas / Rural Areas

Deltatrap Fly Bucket Trap

Control Fly Fly Killer Powder

Control Fly powder, containing the active ingredient Thiamethoxam along with a fly-attracting pheromone and Tricos-9, is a highly specialized and globally recognized insecticide known for its high effectiveness

When mixed with water and sprayed or applied onto designated surfaces, it attracts flies to the treated areas, where they come into contact with and ingest the product, leading to their elimination

The residual effect of this insecticide on surfaces lasts for a minimum of 30 days

It is completely odorless and free from any chemical smell

Recommended application areas

Factories, hotels and restaurants, livestock farms and poultry farms, hospitals, and more

alfakill 15SC Concentrate

A suspension concentrate combining 15% Alphacypermethrin and 3% Tetramethrin. effective against a wide range of insects. It provides instant and long-lasting effects and is suitable for surface spraying in indoor environments

Features

Long-lasting contact insecticide

Odorless and non-staining

Highly effective in enclosed spaces

Can be sprayed using a sprayer pump

Application Areas

Factories / Apartments / Hospitals / Cafes and Restaurants / Hotels / Shopping Centers / Cattle and Poultry Farms / Equestrian Clubs / Gyms / Utility Rooms, Ducts, and Manholes

Cockroach gel bait Fibrokill

Fipronil is an advanced and 100% Fibrokill edible gel with effective product for controlling and eliminating cockroaches and ants. The special formulation of this gel attracts cockroaches and ants; once they feed on it, they carry part of the bait back to their hiding places. Other cockroaches and ants then consume the remaining gel or the carcasses of the poisoned insects, leading to their death. This creates a domino (chain) effect that maximizes effectiveness.

Features

Effective against various types of cockroaches with strong attraction properties

Odorless and environmentally safe

Harmless to humans and pets

No need to move objects or clean after application

Suitable for areas where spraying is not possible

Can be used without shutting down production lines or kitchens

Easy bait placement in cracks and crevices, with no resistance development

Contains a special additive to prevent the gel from drying too quickly

Product Function

Fibrokill Cockroach Gel

ASYEM Rodent Bait

The Asyem Pasta Rodent Bait, a product from the United Kingdom, contains Difenacoum 0.005% as its active ingredient. It belongs to the anticoagulant (blood-thinning) rodenticide generation and features one of the lowest toxicity levels among similar products. Thanks to its soft texture and pleasant aroma, this bait is made from an ideal blend of food ingredients preferred by rodents, effectively attracting them to feed on it. Due to its delayed action, rodents die 3 to 5 days after ingestion, ensuring they do not associate the bait with poisoning and continue consuming it.

Additionally, the presence of the bittering agent Bitrex prevents accidental consumption by non-target animals, making it a safe and effective solution for rodent control.

BROFAR Rodent Bait

The Brofar Pasta Rodent Bait, a product from the United Kingdom, contains Brodifacoum 0.005% as its active ingredient. It belongs to the anticoagulant (blood-thinning) rodenticide generation and features one of the lowest toxicity levels among similar products. With its soft texture and pleasant scent, this bait is made from a premium blend of food ingredients favored by rodents, effectively attracting them to feed on it. Due to its delayed-action formula, rodents die 3 to 5 days after ingestion, preventing them from associating the bait with poisoning and ensuring continued feeding. Furthermore, the addition of the bittering agent Bitrex prevents accidental consumption by non-target animals, making Brofar a safe, efficient, and reliable solution for professional rodent control.

Rodent bait Pasta Defarin

DEFARIN rodenticide pasta bait, a product from Italy contains the active ingredient Bromadiolone 0.005% and belongs to the anticoagulant generation of rodenticides. It has a low level of toxicity. This bait, with its soft texture and pleasant smell, is made from a blend of foods that are highly attractive to mice, encouraging them to feed on it. Due to its delayed action, rodents typically die 3 to 5 days after ingestion. The delayed effect prevents the rodents from associating the bait with poisoning, ensuring continued consumption. Additionally, the presence of the bittering agent Bitrex prevents non-target animals from consuming it

Mouse Bait Box

The Delta mouse bait box is made of plastic and features two entrances, along with a dedicated compartment for storing poisoned bait inside the box. This product protects the bait from weather conditions and dust, preventing non-target animals from accessing the bait.

The box also allows for the monitoring and control of bait consumption and rodent population, which is a requirement under ISO 22000 standards.

Features

- Lockable box with a special key
- Prevents access to non-target animals
- Protects bait from weather conditions
- Allows for monitoring and control of bait usage

Recommended Use Locations

Factories / Commercial and Residential Complexes / Parking Lots / Warehouses / Outdoor Areas

Installation Location
of the Mouse Bait Box

Specifications

Weight	250 g
Dimensions	280x190x75 mm
Material	Plastic
Entrance	63x55 mm

How It Works

Bait Box

Live Mice Trap

The live-catch plastic mousetrap is one of the mechanical methods used to control the population of house mice. This box, equipped with two one-way entrances, safely and humanely traps mice without causing physical harm.

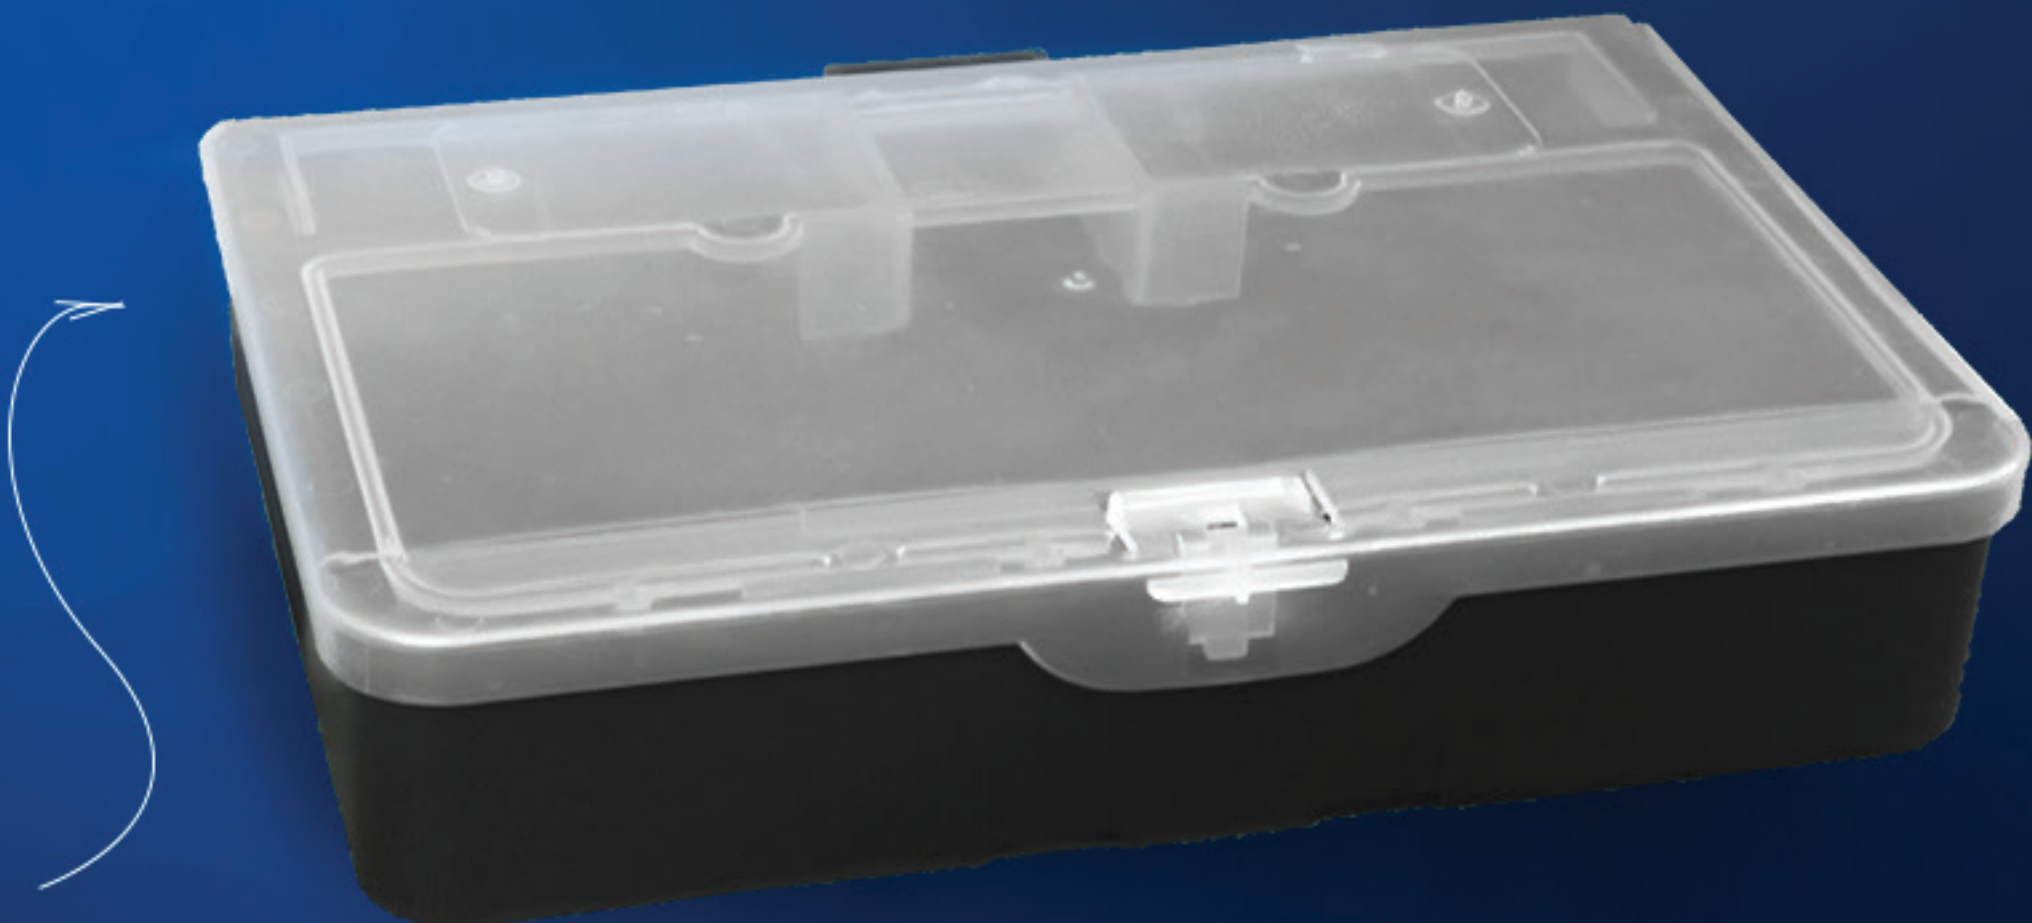

It can be used with or without the special Deltrap glue trap and is particularly useful in environments where using bait is not an option.

Features

- Equipped with two one-way entrances
- Can be used with or without a glue trap
- Includes a holding clip
- Allows live capture and release
- Features a transparent lid

Recommended Use Locations

Apartment / Factory production lines / Warehouse / Kitchen / Hospital / Restaurant

Equipped with two one-way entry doors

Specifications	
Weight	350 g
Dimensions	260x180x52 mm
Material	Plastic
Colors	Black

How It Works

Live Mice Trap

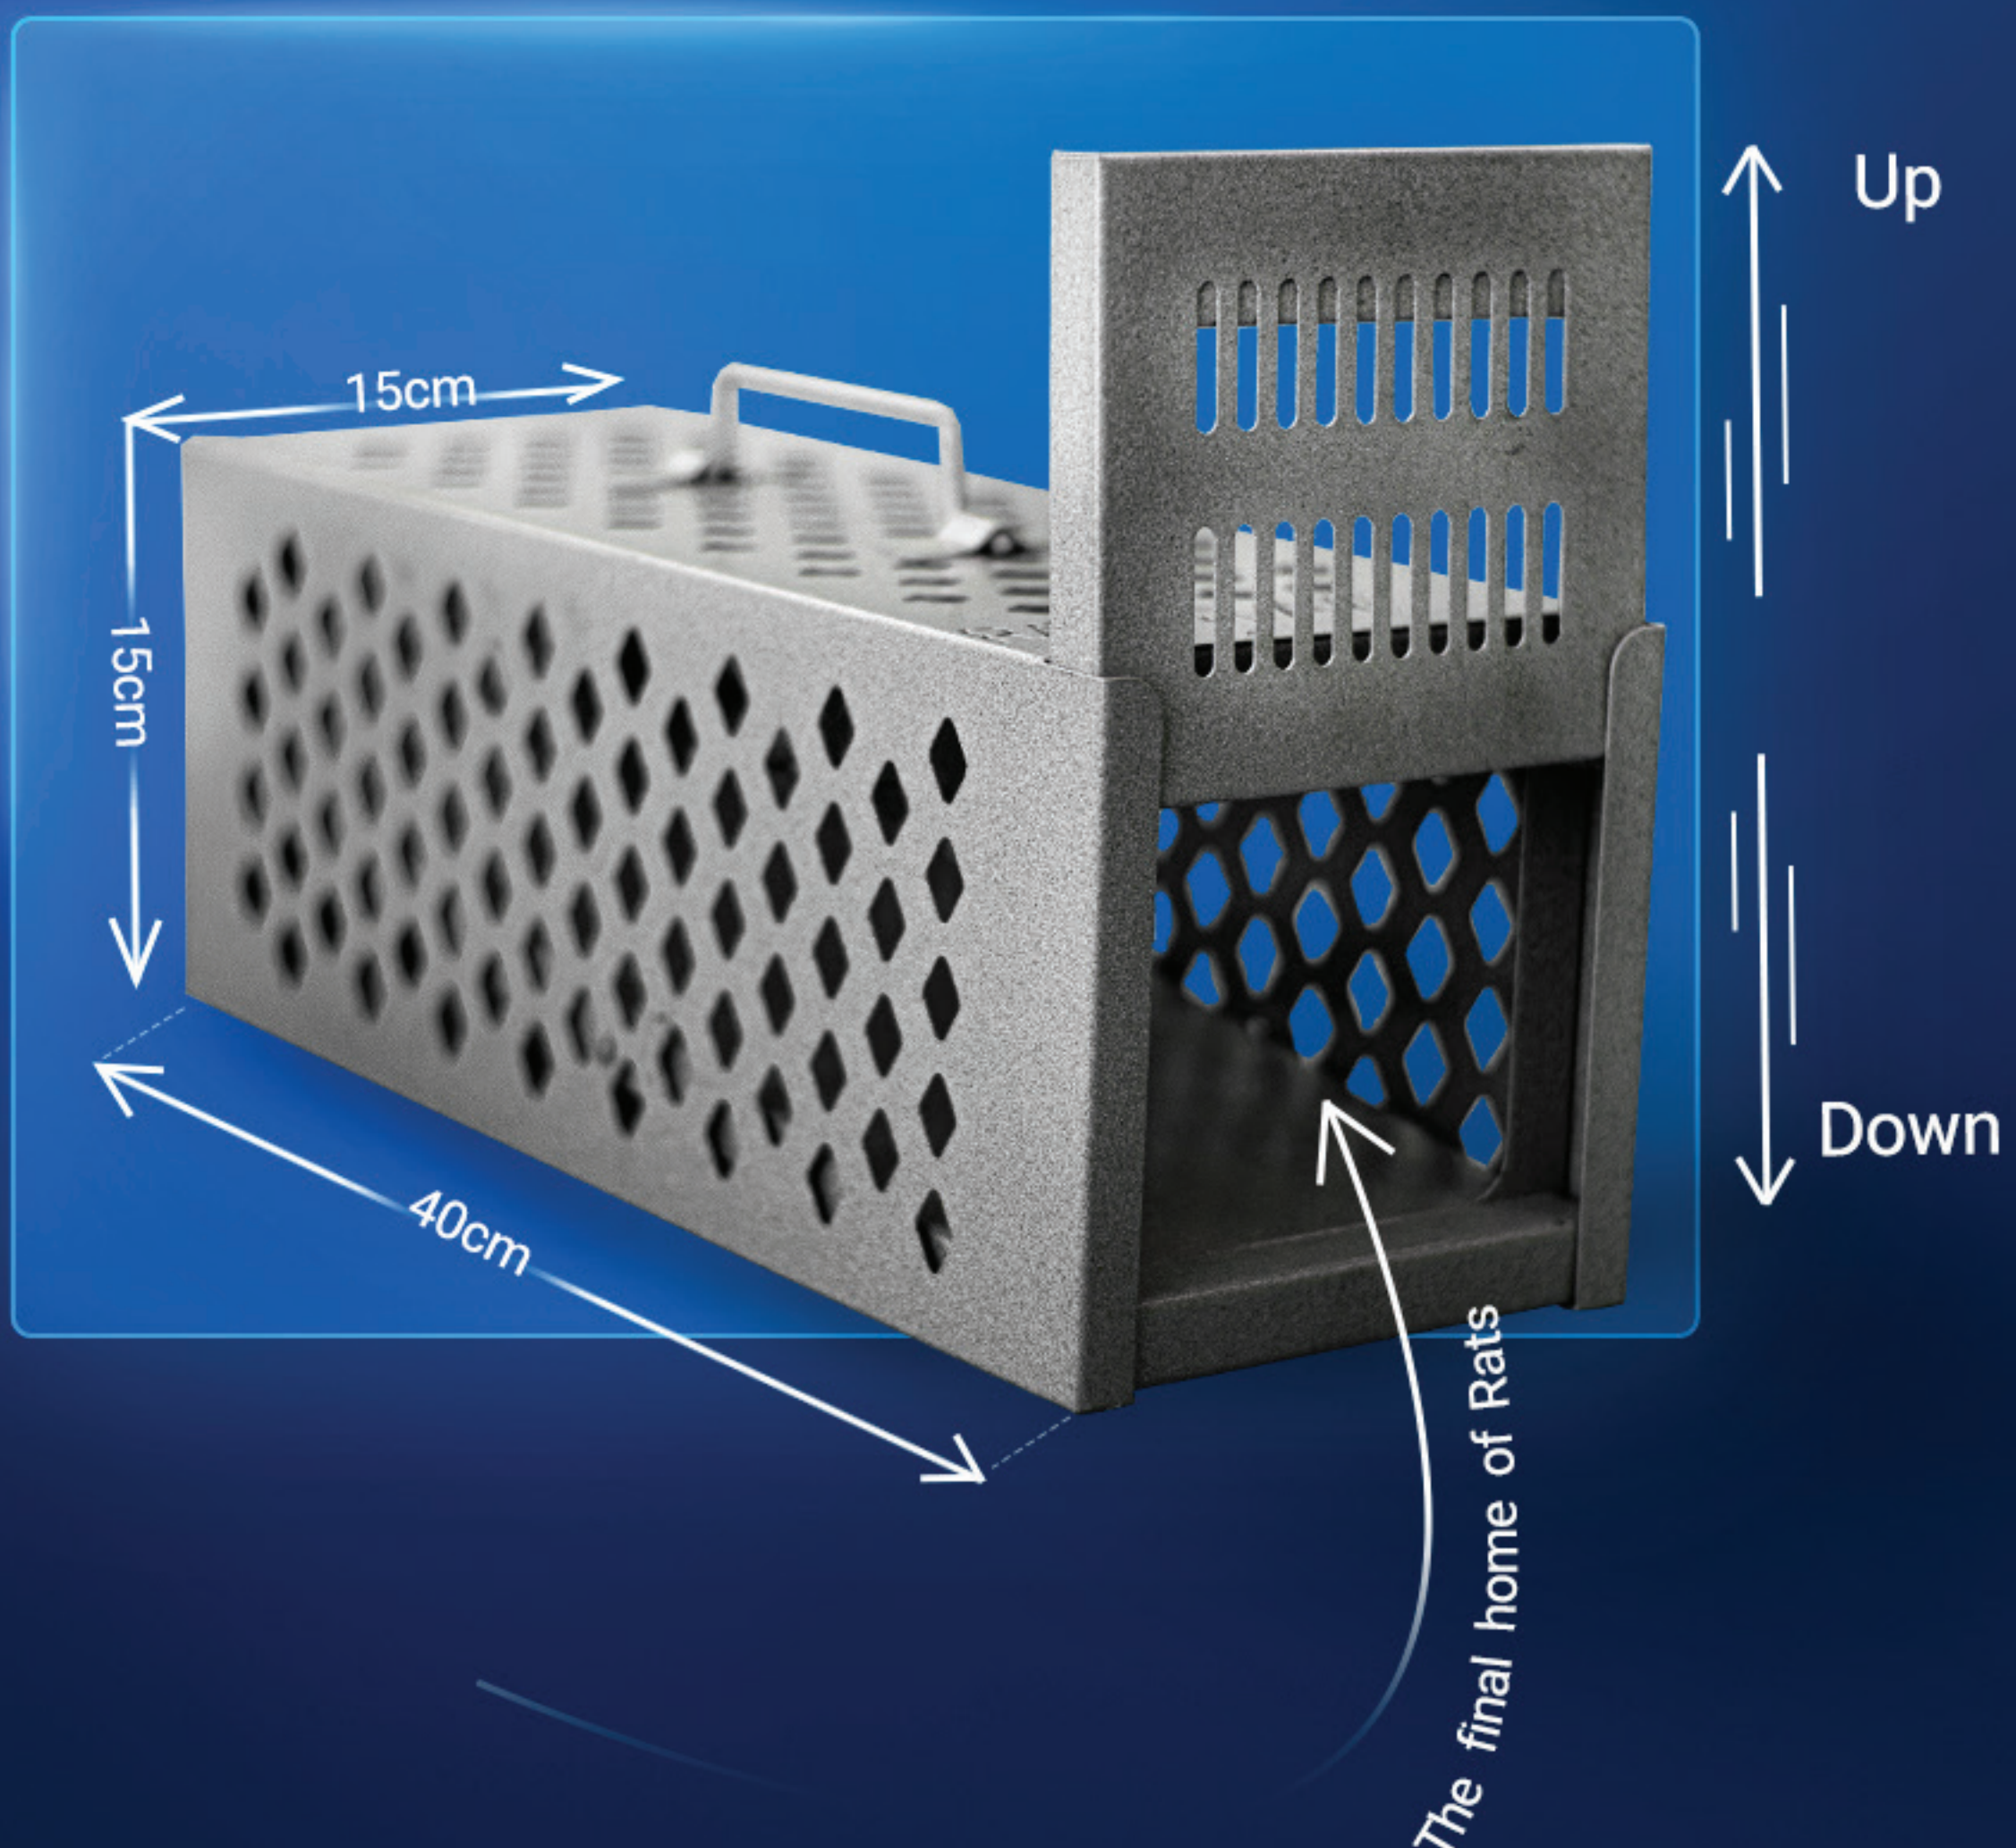

Wild Rat Trap

Produced by:

The rat trap is made of a metal body with an electrostatic coating and is designed to capture large wild rats without causing physical harm

As the rats move toward the bait inside the trap, the door closes behind them, leaving no way for them to escape

deltrap

Glue Mouse Trap

The Deltrap glue trap is a product designed to capture house mice and lizards

It is made of cardboard and coated with organic adhesive. The trap is used by placing a non-toxic, attractive bait on the glue surface to lure and catch pests

Features

Suitable for house mice and lizards

Made of cardboard with special organic glue

Single-use and hygienic

Maintains consistent stickiness

Can be used flat or as a tunnel trap

Includes special glue for plastic mouse traps

Product of Turkey

Specifications

Weight	350 - 400 gram/m ² (Paper)
Dimensions	235x115 mm
Adhesive	12 gram
Heat resistance	- 2°C / + 80°C
Protection	Adhesive (Paper Cover)

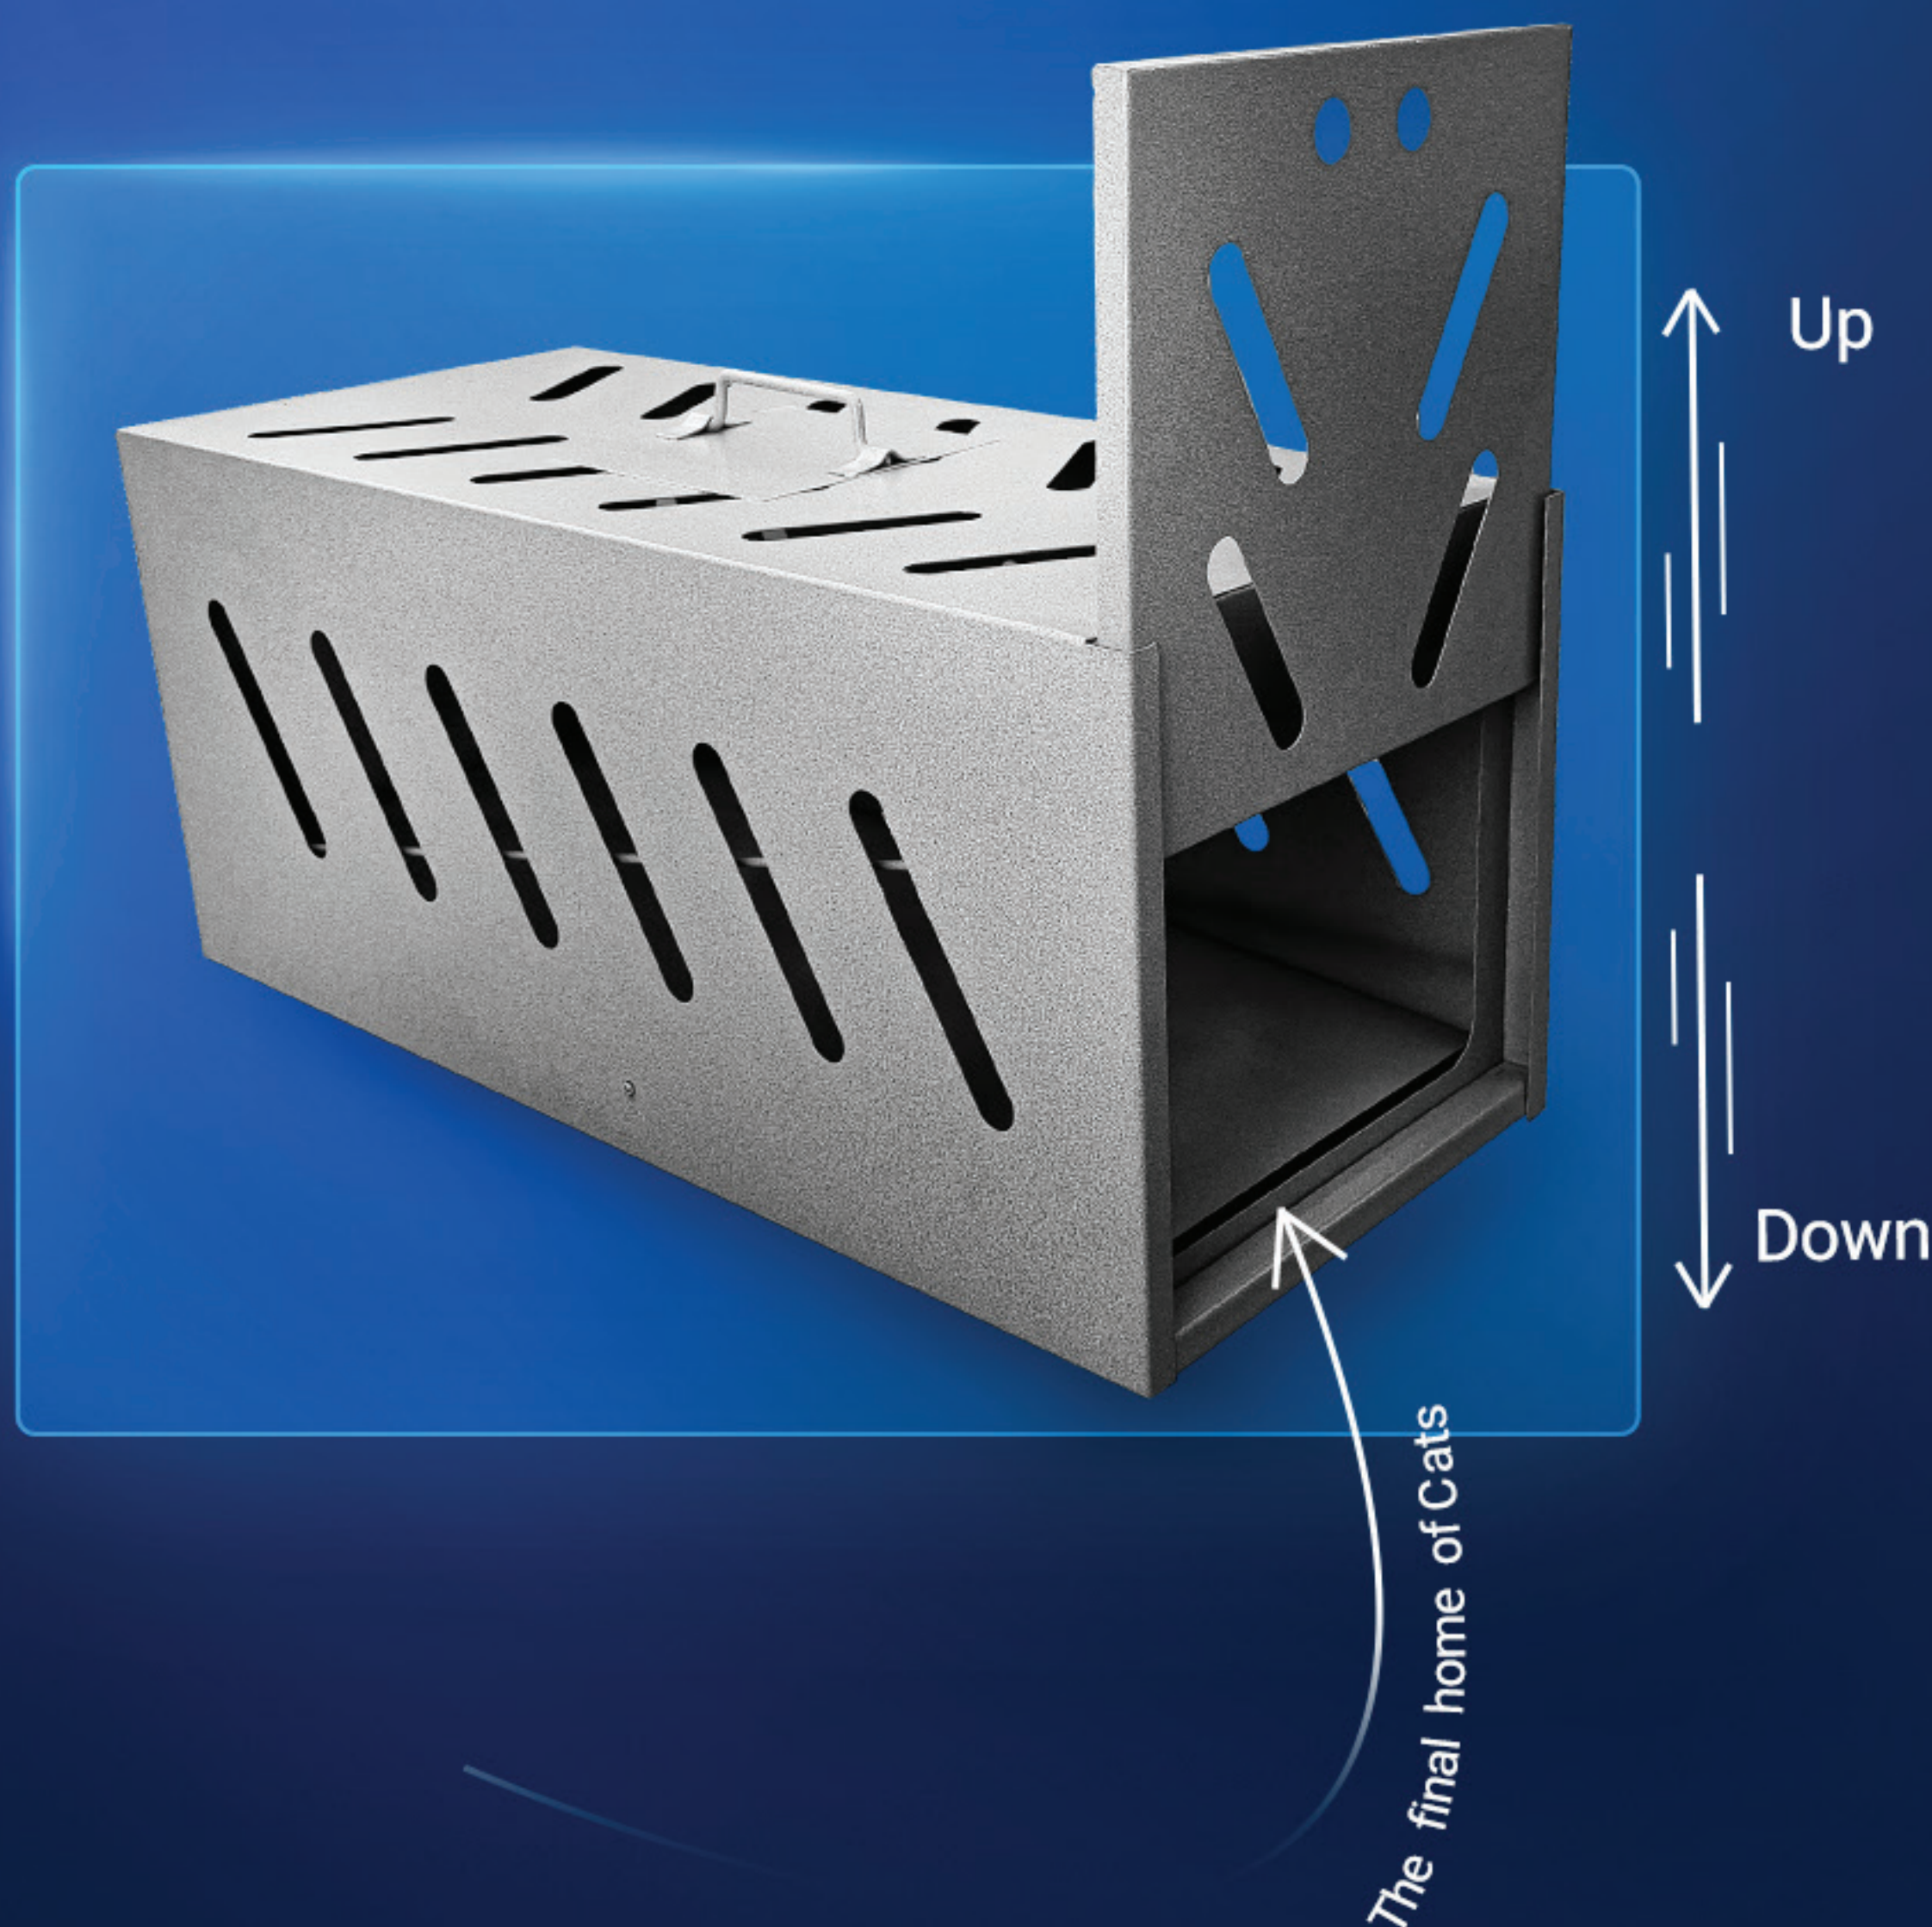

Metal Cat Trap

Produced by:

The metal cat trap with an electrostatic coating is designed to capture cats, squirrels, and martens without causing physical harm. As these animals enter the trap to access the bait, the door closes automatically behind them.

Bird Spike Nashinak

Produced by:

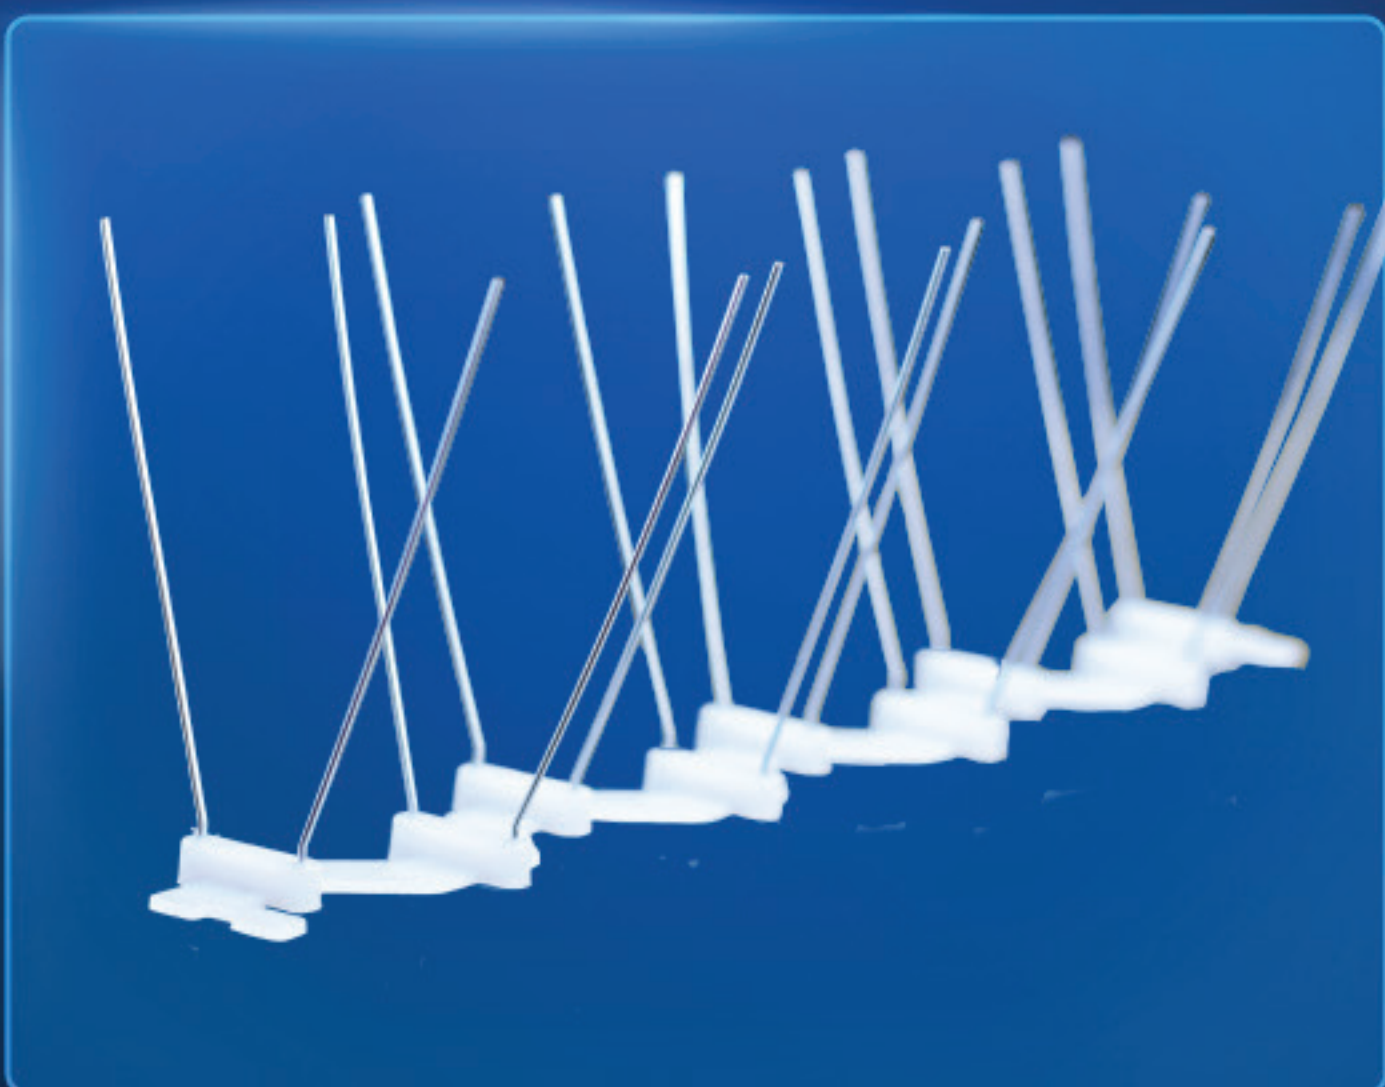

It is a simple and reliable solution to prevent birds from perching and building nests on roof edges, building facades, warehouses, industrial hangars, windows, terraces, balconies, billboards, and other surfaces

This product is designed in a way that prevents birds from landing without causing them any harm, while at the same time preventing contamination caused by droppings, mites, pigeon ticks, clogged gutters, and damage to building facades and parked cars

Neshinak is made of a UV-resistant and flexible plastic base, combined with fully galvanized, rust-resistant wires, making it suitable for harsh weather conditions and ensuring long service life

Key advantages of this product include: easy installation without the need for electricity or batteries, eco-friendliness, and low maintenance costs

With Neshinak, your environment will always remain clean, safe, and free from unwanted birds

Bird Spike Nashinak

Produced by:

Features

No harm to birds

Environmentally friendly

Long service life

Easy installation

No need for electricity or batteries

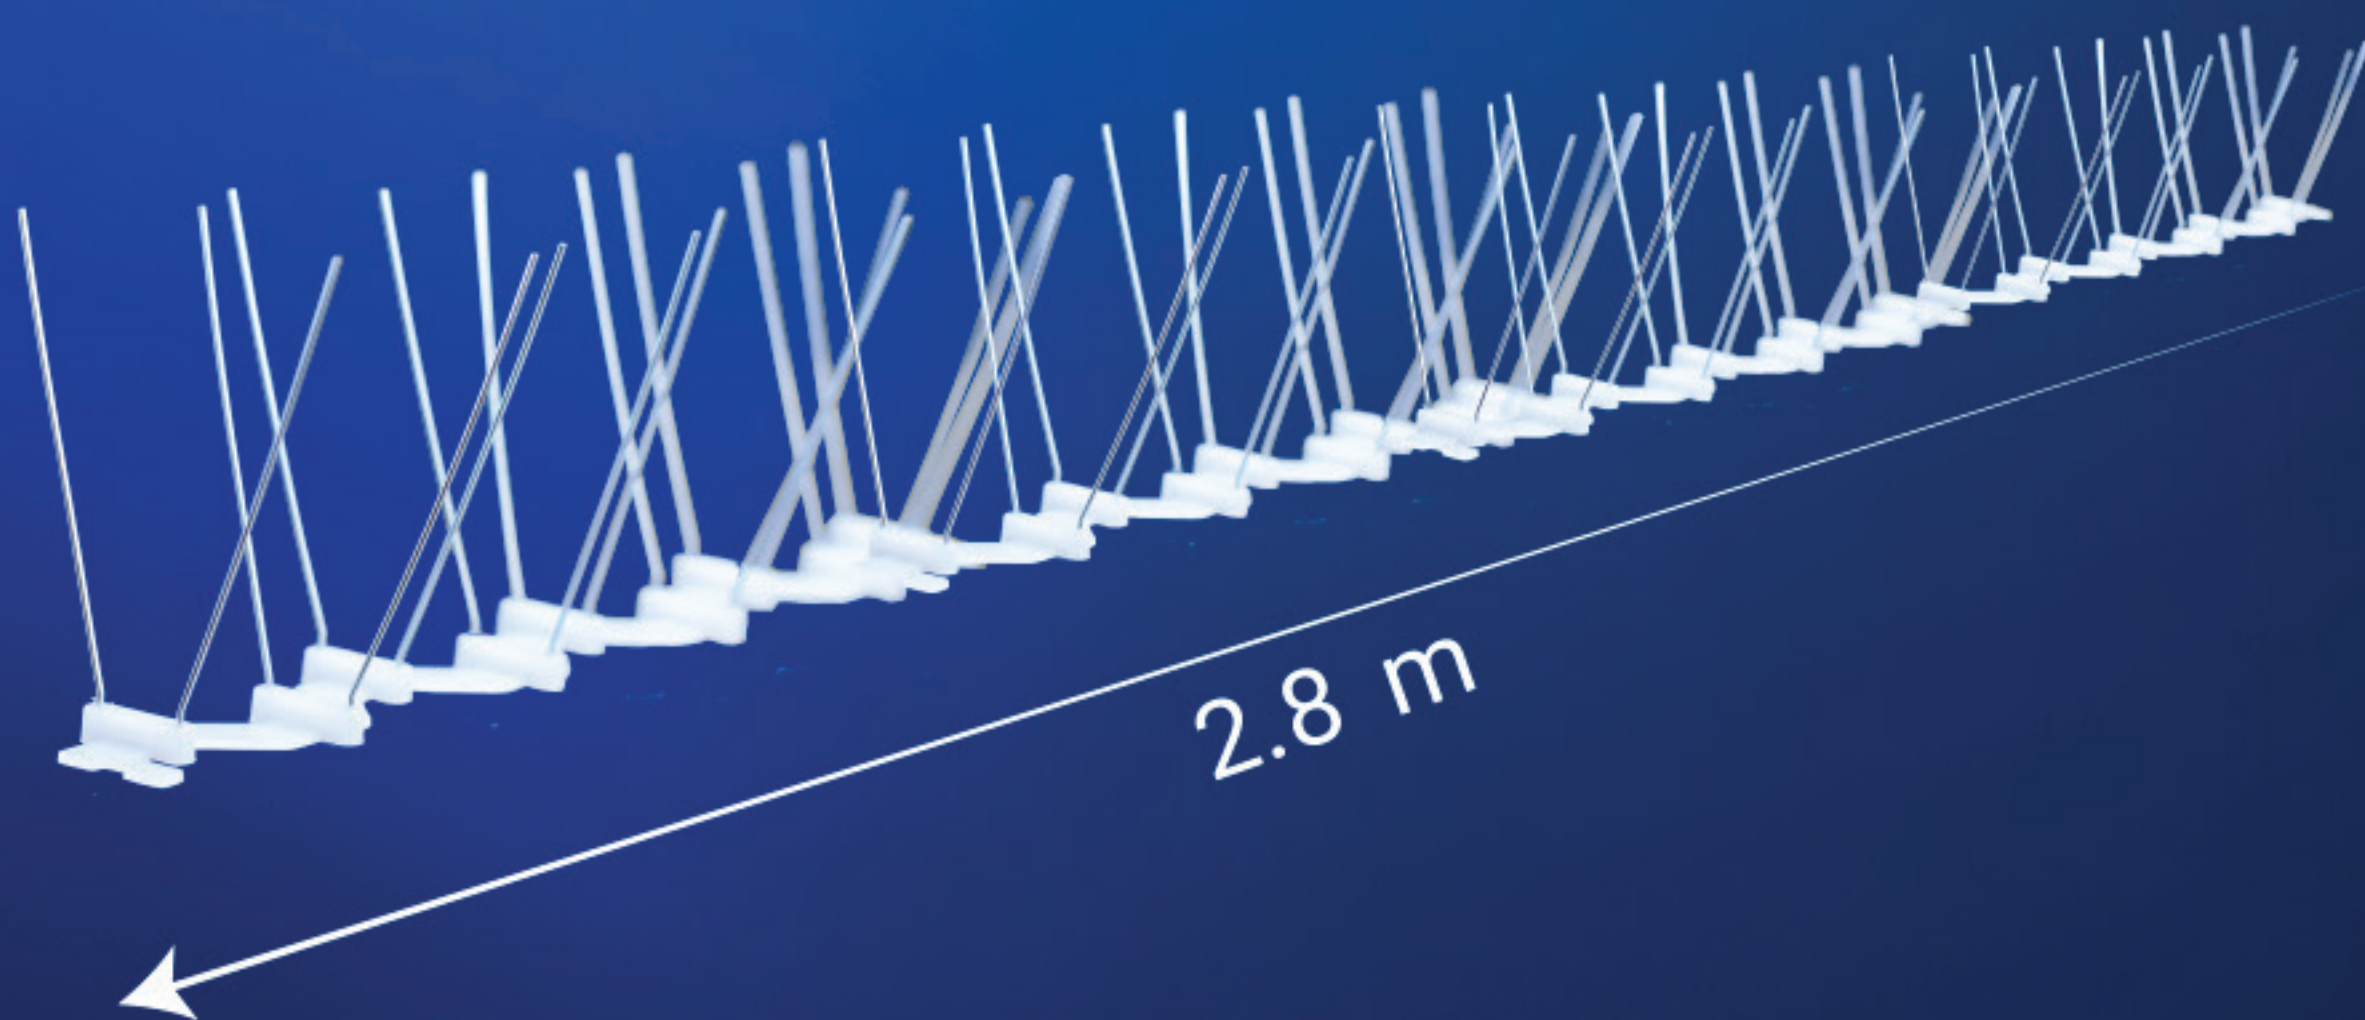

Made of fully galvanized wires

Places of Use

Roof edges and building facades, warehouses and industrial hangars, windows, terraces, and balconies

Each box contains ten branches, each 28 centimeters long
Quantity: $10 \times 28 \text{ cm} = 280 \text{ cm}$
